CORE

TypeScript · React · Next.js (App Router, RSC)
Node · Bun · PostgreSQL (Prisma, Kysely)
AWS (ECS, Cognito) · Render · Docker · SST
GitHub Actions CI/CD · Turborepo
CSS Modules · Tailwind · WebGL · Web Audio

PRACTICE

Design systems & component libraries
Real-time data (WebSockets, streaming)
Data pipelines & event indexing
High-precision numeric & financial logic
Auth & access control (RBAC, MFA)

AVAILABILITY

Remote · CET
B2B contract

EDUCATION

BA, Advertising Photography
Warszawska Szkoła Reklamy

LANGUAGES

Polish — native · English — professional

Full-stack engineer, 10 years building for the web, the last four in fintech. Technical co-founder of Supersmooth, where I started the codebase, built product with a four-engineer team, and own most of production infrastructure. I take repositories from empty to production.

EXPERIENCE

2025 — now

Technical Co-founder · Supersmooth

Product — Started the codebase; wrote ~48% of 1,648 commits on a four-engineer team. Self-custodial investing on smart-contract accounts, seven lending providers; PnL from entry prices read at each event's block.

Infrastructure — Owned most of production: Postgres (Kysely), all CI (5-shard tests), releases that redeploy only changed services, prod-seeded staging (data backfill 60 h to 20 min).

Data & AI — Event-indexer redeploy and reindex workflows; market data for ~15 providers; scheduled risk jobs; OAuth MCP server giving AI agents read-only rates, portfolios and risk.

2022 — 2026

Senior Full-Stack Engineer · Summer.fi (formerly Oasis.app)

Savings product — Co-built from empty repo to production as assets under management approached $200M, main contributor from 2025; yield simulation engine; institutional admin dashboard and its auth (Cognito, RBAC, TOTP MFA).

Pro platform — Borrow / leverage / savings suite on a new infrastructure tier; trigger cross-validation for stop-loss and rebalancing; typed runtime config used during incidents; dependency cleanup across 1,497 files.

Core app — Grew a single-provider product into a multi-provider platform; first integrations for two new lending partners and their yield engines.

2016 — 2022

Full-Stack Engineer · Softax

Regulated enterprise work: vehicle-leasing applications for a major automotive group, retail banking front-ends for two banks, and their back-office tools.

SELECTED PROJECTS

ChainVibe chainvi.be

Multi-tenant live event streaming: one server-side WebSocket fanned out to every client, with failover, dedupe and Postgres-persisted metrics. Published as an npm component library.

Bun · WebSockets · PostgreSQL · React

Resonance resonance.summer.fi

Live product telemetry you can hear: deposits, withdrawals and balances mapped to a generative Web Audio soundscape with WebGL animation.

Next.js · TypeScript · Web Audio · WebGL
